Android Fragments

Aim

Develop an android application to create two activities named as Student Basic Details (Register No., Name, Department) and Student Mark Details (SSLC, HSC, UG). Write an android code to combine these two activities in a single screen using an android fragment.

Procedure:

Step 1 : File \rightarrow New Project

Provide the application name (e.g., "AndroidFragments") and click "Next".

Step 2: Select the target Android devices

Select the minimum SDK to run the application. Click "Next".

Step 3: Choose the activity for the application

By default, choose "Blank Activity". Click "Next".

Step 4: Enter activity name and click "Finish".

Step 5: Edit the program

Create multiple fragments and define their layouts and logic separately.

Manage fragment transactions in MainActivity.kt to switch between them.

Step 6: Run the application

Two ways to run the application:

- 1. Running through emulator
- 2. Running through mobile device

And roid Manifest.xml

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"</pre>
   xmlns:tools="http://schemas.android.com/tools">
   <application</pre>
       android:allowBackup="true"
       android:dataExtractionRules="@xml/data extraction rules"
       android:fullBackupContent="@xml/backup rules"
       android:icon="@mipmap/ic launcher"
       android:label="@string/app_name"
       android:roundIcon="@mipmap/ic launcher round"
       android:supportsRtl="true"
       android:theme="@style/AndroidFragments"
       tools:targetApi="31">
       <activity
           android:name=".MainActivity"
           android:exported="true">
           <intent-filter>
               <action android:name="android.intent.action.MAIN" />
               <category android:name="android.intent.category.LAUNCHER" />
           </intent-filter>
       </activity>
   </application>
</manifest>
```

Activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout</pre>
   xmlns:android="http://schemas.android.com/apk/res/android"
   xmlns:tools="http://schemas.android.com/tools"

       ugcgpaEditText = view.findViewById(R.id.editTextUGCGPA)
```

```
return view
   }
   // Method to get the entered SSLC mark
   fun getSSLCMark(): String {
       return sslcMarkEditText.text.toString()
   }
  // Method to get the entered HSC mark
   fun getHSCMark(): String {
       return hscMarkEditText.text.toString()
   }
  // Method to get the entered UG CGPA
   fun getUGCGPA(): String {
      return ugcgpaEditText.text.toString()
   }
}
```

Output

Result:

To design a Kotlin application that utilizes fragments to manage multiple UI components within a single activity.
